

CHEST PAIN?

CALL 9-1-1 IMMEDIATELY.
DO NOT DRIVE. DO NOT WAIT.

Immediate Care From Paramedics

When you call 9-1-1, paramedics come to you and begin treatment immediately. Driving yourself delays treatment and puts you at greater risk.

Faster Treatment with 9-1-1:

People who call 9-1-1 receive care up to 20-minutes faster. That time can mean the difference between a full-recovery and permanent damage.

Safe and Fast Transport

Paramedics are trained to get you to the hospital quickly and safely. They can navigate traffic and use specialized equipment to provide care along the way. If your condition gets worse while driving yourself, there is no immediate medical help available.

Better Survival Rates:

The survival rates are higher for people who take an ambulance to the hospital.

Early Hospital Communication

Paramedics can communicate with the hospital ahead of your arrival so your care team is ready the moment you get there.
